

## FIELD OF APPLICATION

### of Quality and Environmental Systems Management

Metallurgica Marcora S.p.a. has defined a Quality System Management in compliance with international standards UNI EN ISO 9001 and IATF 16949 and an Environmental System in accordance with international standard UNI EN ISO 14001.

The Company's intentions and commitment are expressed in the document "Company Policy" to which express reference is made.

The field of application of the above systems includes the activity **production of carbon and alloy steels, hot rolled in bars and coils**, carried out at the productive plant in

### **Cuggiono (Mi) – Via IV Novembre n. 71**

In particular, the production process is divided into the following main single phases:

- Steel billets heating
- Descaling
- Cogging
- Intermediate and paver lamination;
- Evacuation and packaging of finished products in bars or in coils

And the support activities to the above process consist of:

- Management lamination equipment
- Storage of raw materials and delivery of finished products
- Equipment maintenance (also by external companies)
- Auxiliary equipment management (also by external companies)

In defining the field of application the Company has considered:

- the relevant internal and external factors for business purposes and for the achievement of the management system objectives, including environmental conditions influenced or able to influence the Company;
- the stakeholders' requirements and their needs and expectations, including possible compliance obligations;
- its authority and ability to exercise control and influence;
- any specific customer requirements.
